SUMMARY

Software Developer and QA with over a year of experience in C#, Python, and Unity, specializing in game optimization and process automation. Experienced in reverse engineering, code debugging, and AI integration in games. Game Developer with one commercial game published on Steam and several original projects. Strong experience in Quality Assurance, responsible for identifying, documenting, and assisting in the correction of over 100 bugs per build in production environments, combining creativity and technical expertise to develop high-impact solutions.

PROFESSIONAL EXPERIENCE

QA Analyst | Converting Minds | 2025 – Current

- Acting as QA on the game Sparky Rush (available on Steam), being responsible for identifying, reproducing and documenting more than 50 critical bugs before the demo's release at Steam NextFest.
- Creating detailed bug reports and working directly with the development team to optimize performance and ensure game stability.
- Using tools like Trello and Jira for task management and QA documentation.
- **Technologies:** Unity, C#, Trello, Jira, Excel, QA Documentation.

FEATURED PROJECTS

Outcaster – Original Game in Development

- Retro FPS (boomer shooter) inspired by classics like DOOM and Devil May Cry.
- Technical leader of a team of 15 people, responsible for code architecture, combat systems implementation, and overall game balance.
- **Technologies:** Unity, C#, ShaderLab, Git, Design Patterns (Singleton, Object Pooling).

Fable III Fixer – Performance & Graphics Patch

- Electron desktop application that automates the application of graphics optimizations and performance fixes for Fable III, integrating DXVK, ReShade, and custom scripts.
- **Results:** +45 unique users and +65 downloads on NexusMods.
- **Technologies:** JavaScript, Node.js, Python, DXVK, ReShade, PowerShell.

FF13Fix – Microsoft Store Edition

- Adaptation of the FF13Fix mod for the UWP version of Final Fantasy XIII, allowing the injection of DLLs and mods without violating the Microsoft Store DRM.
- **Technologies:**Python, PowerShell, Reverse Engineering.

AutoParMS / LADFixMS – Modding Tools for Yakuza

- Tools that automate the installation of mods and performance optimizations in Yakuza series games (Microsoft Store).
- **Technologies:**Python, Reverse Engineering, Vulkan, DXVK.

The Outer Worlds Fix – Optimization Installer

- Application that automatically applies optimized libraries to improve the performance of The Outer Worlds (MS Store).
- **Technologies:**Python, Automation, DLL Injection.

Yu-Gi-Oh! Forbidden Memories Web

- Web reimagining of the PS1 classic using the YGOPRODeck API and Gemini API to generate new card fusions.
- **Technologies:**TypeScript, React, Node.js, Gemini API, YGOPRO API.

OTHER TECHNICAL PROJECTS

- **GFWL-Custom-Proxy:**Proof of concept hook for SecuRom and optimized Xlive.dll stubs (GFWL) in C++.
- **Quantum of Solace - Vulkan/DXVK Injector:**Python script for DLL injection, allowing the use of modern graphics APIs for better performance.
- **Better XCloud Optimized:**Optimized fork with JavaScript code refactoring to improve the clarity and performance of the cloud gaming service.
- **GZDoom for UWP/Xbox DevKits:**Fork of GZDoom with C modifications to enable operation in UWP environments and Xbox devkits.
- **Xbox Gamelist Extractor:**GUI application (Tkinter) that uses web scraping with Selenium to extract game lists from Xbox profiles.
- **PYGopher - Joystick Mouse Control:**Fork of Gopher360 rewritten in Python that allows full mouse control via joystick for accessibility.
- **TEXTMAP to OBJ Converter:**Command line tool that converts UDMF format to 3D.OBJ models.
- **BOIII UWP:**Custom Call of Duty: Black Ops 3 client for the UWP version.

QUALIFICATIONS AND SKILLS (HARD SKILLS)

- **Languages:**Python, C#, C/C++, JavaScript, TypeScript, PowerShell, Lua, GSC, HTML/CSS.
- **Game Engines and Tools:**Unity 3D, Unreal Engine 5, GZDoom Engine, Raylib, Pygame, ShaderLab, SLADE.
- **Frameworks and Libraries:**.NET, Electron, Node.js, React, Flask, Tkinter.
- **QA and Automation:**Selenium, Playwright, AutoHotkey, Postman, Docker, Manual and Automated Testing.
- **Cloud and AI:**Azure AI Services, Azure Machine Learning, OpenAI API, Gemini API, Generative AI.
- **Reverse Engineering and Debugging:**ILSpy, dnSpy, x64dbg, Process Monitor, UWP Hooking, DXVK / Vulkan Injection, GHIDRA.
- **DevOps and Collaboration:**Git/GitHub, Docker, JIRA, Trello, CI/CD, GitHub Actions.
- **Operating Systems:**Windows (Dev/UWP), Linux (Ubuntu/Debian), XboxDevMode.

ACADEMIC TRAINING

- **Bachelor's Degree in Computer Science**– UFBRA (Starting in Jan/2025)
- **Digital Games Technologist**– UNIASSELVI (Starting in June/2025)
- **Administrative Technician** -ETEC (Completed in 2018)

COURSES AND CERTIFICATIONS

- **Digital Innovation One (DIO):**Over 160 certificates completed in Bootcamps (Santander, Microsoft, Avanade, WEX, GFT) covering:
 - Generative AI, Azure Machine Learning, Cloud Fundamentals, DevOps, .NET, Unity 3D, Software Quality, Testing and Programming Logic.
- **Alura / Oracle ONE:**Back-End Training with Java.
- **Udemy:**Game Development with C# and Unity 3D.
- **EBAC:** Unreal5

SOFT SKILLS

- Complex problem solving and logical reasoning
- Autonomy and continuous learning
- Attention to detail and accurate documentation
- Technical communication and team collaboration
- Creativity and technical innovation
- Focus on results and work under deadlines

LANGUAGES

- **Portuguese:**Native
- **English:**Advanced (C1 – Technical reading and professional communication)
